Voices: Past and Present

Judith Maginnis Kuster ISAD 2015

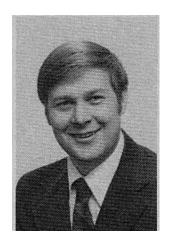

The recently-released Beloit College List (http://www.beloit.edu/mindset/2019/) for the 2019 graduating class startled me not only with how old I've gotten, but also who these students are!

- They were born after Princess Di and Mother Theresa had died.
- Google has always been there for them
- Hong Kong has always been under Chinese rule in their lifetime
- They have grown up treating Wi-Fi as an entitlement

Students are embarking on an exciting journey in speech therapy – much new since I began in this field

- Child language disorders has become a major focus in the public schools rather than articulation disorders
- Swallowing disorders is a major focus for those working in a rehabilitation center or hospital
- Cochlear implants have made hearing possible for many people who are deaf
- Computer technology has opened doors to communicate in ways previously impossible
- There is an increasing focus on literacy

Two important contributors to the field of Speech-Language Pathology and Audiology (Raymond Kent and Charles Van Riper) delivered the same message in the same year. This presentation is in part, a response to their important wise words.

"... If we are to know where we are, we should know where we were." (1982)

"If we are to know where we are going, we should know where we began." (1982)

This presentation calls for us (and the new generation of students) to learn about and also celebrate some of our field's "roots"

Our profession is old enough to have a rich history, especially in the area of stuttering. The discipline will be stronger as we help future generations understand and appreciate some of the founders of our field and honor their contributions.

The powerpoint will provide short recordings of several "voices" of a few of the grandfathers and also encourage them to "meet" some of the current generation of professionals in the area of stuttering by introducing...

Voices: Past and Present

www.mnsu.edu/comdis/voices/voices.html

a web site developed to preserve some of the oral history of our profession, specifically in the area of stuttering.

Uses - Voices: Past and Present

Included are some edited samples of Voices from the Past

- A sample from Joseph Sheehan's 1957 ASHA panel
 - Wendell Johnson
- Two samples from the UW-Madison 1959 Symposium on Stuttering
 - Carl Rogers and Bryng Bryngelson
- Two samples from the 1968 ASHA panel on "recovery"
 - Lee Edward Travis and Thomas Alexander (client of Sheehan)
- ◆ A 1968 edited sample of Charles Van Riper's speech at the Council for Adult Stutterers

From the 1957 Panel discussion on "recovery" ASHA Convention - Cincinnati, Ohio

We are fortunate to have this panel presentation available. Fred Murray tells the story of running into Joseph Sheehan, who was facilitating the panel, in the hall at the convention, wondering if the panel was going to be audio taped. Sheehan responded that there were no plans to do that, but if Murray could arrange it, that would be all right. Murray, out of his own pocket, found someone to record it for \$100, which at that time was a considerable sum. Thanks to Fred's quick thinking and generosity, this classic has been preserved.

Various Presentations about the Nature of Stuttering

The audio clips below are of edited versions of people talking about their ideas at the time of the presentation about the nature of stuttering. Important disclaimer: The speeches are provided here for their historical significance, and reflect various views. The individuals were explaining their ideas at one point in time and may or may not reflect what they believed later. It is important that information from these clips not be taken as specific treatment suggestions for individuals who stutter. Determination of treatment for stuttering is best done in face-to-face coordination with a certified Speech-Language Pathologist. Two of the tapes by Van Riper and Brygelson (in this section and one in the section below) presented special challenges. The tapes were defective, but when played backwards, they were fine, apparently bleeding through the other side of the tape. The sound editor suggested by Bob Quesal, (Sound Studio) allows you to reverse the sound, making a backwards copy. So the tapes were digitized backwards, and the editor reversed them into pretty good quality recordings. The tapes were part of a series called "Lectures in Speech Pathology and Audiology" and were copyrighted by Luther F. Sies, Ed.D., of the Fine Arts Recording Company, Inc. An internet search found Dr. Sies in Arizona and he gladly consented to allowing the tapes to be placed online.

Charles Van Riper - 1962, Causes, Nature and Development of Stuttering refers to the famous Birch Tree
